trust MMR Technologies....*

*... the variable temperature solid state characterization experts!*

## **MMR Technologies' Applications Page Website Submission**

Thank you for your interest in submitting your research success stories to MMR Technologies. We are excited to have the opportunity to showcase your successes with our equipment!

### **Requirements for Website Applications Submission**

- For each graphic involving lines, drawings, charts, graphs, etc. -- the file should be in a "vector" format such as EPS, AI, WMF, or DXF.
- For each photo or "picture" image -- the file can be in one of the following "bitmapped" formats: TIFF, BMP, PNG or JPG. The size of the image should be 3" x 3" or larger at 300dpi.

Note: If you are using the JPG format, create the file using maximum resolution/quality settings -- and send first-generation JPG files. Repeatedly-copied JPGs lose quality in each generation.

### **In addition:**

- If the application is submitted as one integrated piece, such as in a Word document with images imbedded, please also submit each of the graphics and photos as a separate file.
- If the document uses any special characters, Greek letters, etc. (which sometimes render differently on different computers) we would also appreciate a PDF of the document to clarify which characters were intended.)

### **Application Outline:**

If you do not write an integrated document, please provide a simple outline of how you would like to organize your application.

- Application Objective(s)
- Application Challenge(s)
- MMR Equipment Used
- How Application Objectives Were Achieved
- Results/Summary
- Publication References using this information or success

The maximum length for any submission should be two pages, 9 point type.

Please make sure all submissions include a completed submission form which can be downloaded from our website. Incomplete submissions will not be placed on the website.
